

S4 4" SUBMERSIBLE PUMPS

CE DOMESTIC, INDUSTRIAL WATER SUPPLY

Multistage, centrifugal, submerged motor-driven pumps for 4" wells or larger, able to generate a vast range of heads and flow rates.

They can be employed in a wide range of lifting, distributing and pressurising applications in civil and industrial water installations, supplying autoclaves and cisterns, fire fighting and washing systems, irrigation systems.

Constructional characteristics:

Base support and upper head (with built-in check valve) in stainless steel. Stainless steel cable cover.

Two-pole, water-filled, submersible TESLA electric motor, built entirely in AISI 304 stainless steel for the parts in contact with the water. Canned-type stator.

Capacitor and manually resettable overload protection inside the panel.

Protection for the three-phase version is the responsibility of the user.

Pumped liquid: clean, free from solid or abrasive substances, chemically neutral and close to the characteristics of water.

Liquid temp. range: from 0°C to +40°C.

Motor protection level: IP 68.

Insulation class: F.

Special versions on request: with different voltages and/or frequencies.

Maximum content of sand: 120 g/m³.

The CONTROL BOX HS is available on request for the single phase version to increase the static torque.

Available also with TESLA oil - filled motor. (On request).

TECHNICAL DATA

SUBMERSIBLE PUMPS + ACTIVE DRIVER SELECTION TABLE EXAMPLE

EXAMPLE OF INSTALLATION

DISCHARGE LINE (TO HOUSE)

Expansion tank (3 - 8 litres)

Active Driver inverter system

NECESSARY COMPONENTS FOR SYSTEM INSTALLATION

1. Submerged pump
2. Inverter
3. Non-return valve
4. Expansion tank
5. 1 inverter power cable
6. 1 cable between inverter and pump

Caution:
 In the version with single phase/single phase inverter (AD M/M 1,1) it is necessary to install the control box model electric panel, containing the starter condenser.

Non-return valve fitted to facilitate maintenance

SUGGESTION:
 In some plants, we recommend the installation of a filter upline of the AD so as to prevent damage to the pressure sensor inside the inverter.
