ITT

ENGINEERED FOR LIFE

Goulds JC

Designed for Handling a Wide Range of Corrosive / Abrasive Slurries

- Capacities to 7,000 GPM (1,600 m³/h)
- Heads to 240 feet (73 m)
- Temperatures to 250° F (121° C)
- Pressures to 127 psig (876 kPa)
- Spherical solids to 2¼ inches (57 mm)

Design Features

- Extra-Thick Wet End Components – For extended wear life.
- Replaceable Wear Liner – Low maintenance cost.
- Heavy-Duty Power End – Increased mean time between failures.
- External Impeller Adjustment – Maintains original efficiency; simple and fast.
- Maximum Parts Interchangeability – Entire line uses just five power ends.
- Sealing Flexibility – Choice of packing, mechanical seals or Dynamic Seal.

Applications

- Wet scrubber systems
- Waste sludge
- Fracking slurries
- Paper mill wastes and liquors
- Clay and sand slurries
- Dirty water
- Kaolin clay
- Carbon slurry
- Lime mud
- Precipitated CaCO₃

Thousands of installations attest to the remarkable versatility of the Model JC Slurry pump. Sixteen sizes are available in a wide range of materials and configurations, making the JC ideal for most medium-duty abrasive and / or corrosive slurry services. Plus, it's designed for extreme ease of maintenance and long hours of reliable operation.

Designed for Long Life, Reliable Operation

Pump End

Wet-end components feature extra metal thickness for extended wear. Replaceable suction cover liner takes all wear on suction side of casing; simplifies maintenance. Efficient slurry design impeller for long life, optimum performance. Components are fully-machined for positive alignment.

Stuffing Box Cover

Casing

Impeller

Suction Cover Liner

Suction Cover

Power End

HEAVY-DUTY BEARING FRAME

Rugged one-piece design with integral drip basin. Five frames accommodate sixteen pump sizes. Grease or oil lube.

RUGGED SHAFT ASSEMBLY

Designed for continuous service under the most severe operating conditions. Shaft designed for minimum deflection at maximum loads.

EXTERNAL IMPELLER ADJUSTMENT

Original performance easily maintained by adjustable jacking screws without disassembly of pump.

REPLACEABLE SHAFT SLEEVE

Hook-type sleeve protects shaft from pumpage.

Sealing Flexibility

Dynamic Seal for Elimination of Mechanical Seal Problems; Reduced Maintenance

Goulds Dynamic Seal option is ideally suited to handle the tough applications where mechanical seals or packing require outside flush and constant/costly attention. An expeller between the stuffing box cover and impeller pumps liquid from the stuffing box.

For most applications, external seal water is not required – eliminating leakage, pumpage contamination, product dilution and problems associated with piping from a remote source.

Mechanical Seal

Goulds offers a variety of mechanical seals for applications flexibility including special slurry seals for tough services. In addition, a special enlarged seal chamber is offered for improved lubrication and cooling of the mechanical seal. The tapered throat keeps solids away from seal faces and from building up in the chamber. Seal life is remarkably extended.

GOULDS TAPERBORE™
SEAL CHAMBER

SLURRY
MECHANICAL SEAL

Application Flexibility

The Model JC is extremely versatile. A variety of drive arrangements can be supplied for application flexibility.

DIRECT DRIVE UNIT

OVERHEAD BELT DRIVE

Side-by-side also available

For Sump Pumping Applications

When the Model JC's performance and features are required for sump services, you can choose either a Model JCU submersible or Model VJC cantilever for extended service in abrasive slurry applications.

Model JCU Submersible Slurry Pump

- Capacities to 4,000 GPM (910 m³/h)
- Heads to 210 feet (65 m)
- Temperatures to 194° F (90° C)
- Solids to 2 inches (50 mm)

Features

- Adjustable impeller clearance
- Permanently lubricated bearings
- Automatic reset thermostats
- Tandem mechanical seals
- Optional slide rail assembly

Model VJC Vertical Cantilever Slurry Pump

- Capacities to 7,500 GPM (1,703 m³/h)
- Heads to 240 feet (73 m)
- Temperatures to 200° F (93° C)
- Pit depths to 11 feet (3.4 m)
- Solids to 2 1/4 inches (57 mm)

Features

- Cantilever design
- External impeller adjustment
- Heavy-duty bearings
- Bottom suction
- Removable suction liner

Model JCU

Model JC Medium-Duty Slurry Pump

Design Features for Wide-Range
of Corrosive /Abrasive Services

SUCTION COVER LINER

Replaceable part takes all wear
on suction side of casing.

IMPELLER

Best design for slurry services / proven
by wear-testing and field experience.
Back pump-out vanes reduce stuffing
box pressure, keep solids out of
stuffing box.

FLEXIBLE DISCHARGE POSITION

May be rotated in field to any
of eight positions.

CASING

Extra-thick wall sections for extended
wear life, reduced maintenance.
Dual-volute design where necessary
to reduce radial loads.

SHAFT SLEEVE

Hook-type design with
gasket for shaft protection.

MECHANICAL SEAL

Expeller option for absolute dry box sealing. No outside flush required.

DYNAMIC SEAL

Expeller option for absolute dry box sealing. Often eliminates flush requirements.

BEARINGS

Radial and thrust bearings are sized for 3-year life (25,000 hours). Grease or oil lubrication.

EXTERNAL IMPELLER ADJUSTMENT

Maintains maximum efficiency by simple adjustment.

HEAVY-DUTY SHAFT

Large diameters to handle high loads, reduce shaft deflection.

Goulds JC

Hydraulic Coverage

Proven Performance

Goulds Model JC is used in many industries on the most demanding slurry pump applications. The versatility of the product combined with rugged design and ease of maintenance have satisfied thousands of users' requirements for a pump that has it all.

PRO services

Reliability has no quitting time.

Building on over 160 years of Goulds Pumps experience, PRO Services provides an array of services focused on reducing equipment total cost of ownership (TCO) and increasing plant output, including predictive monitoring, maintenance contracts, field service, engineered upgrades, inventory management, and overhauls for pumps and other rotating equipment.
