Liquid Flow Rate vs. Differential Pressure

Flow rate is per 10" (25.4 cm) cartridge. For liquids other than water, multiply differential pressure by fluid viscosity (cP).

¹ - Chlorine reduction data is for 2 ppm free chlorine to <0.5 ppm.

WARNING:

For drinking water applications, do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.

NOTE:

Some harmless bacteria will attack cellulose media cartridges. If your cartridge seems to disintegrate, or has a "musty or moldy" odor, switch to a synthetic media cartridge or consult Pall.

CAUTION:

Filter must be protected against freezing, which can cause cracking of the filter and water leakage.
