

Electropure™ EDI EXL-850

New: Higher Quality EDI at Higher Feed Conductivity

EXL-850 High TDS EDI Modules

ELECTROPURE™ **EXL-850** EDI modules are designed to be the highest rejection EDI modules on the market. EXL is configured to easily build ultrapure water systems with the well-known benefits of Electropure™ EDI technology. The EXL-850 can achieve better quality even with 1-Pass RO, saving you money.

ELECTROPURE™ EXL-850 modules have next-generation innovative technology inside. The 850 series is designed to handle higher FCE, Feed Conductivity Equivalent. This means that the EXL-850 will perform very well at higher TDS and higher CO₂ and SiO₂ loading. As always EXL includes Electropure's patented Excellion™ membranes, "never-leak" permanent O-ring seals, unique non-scaling electrode system, efficient thin-cell technology, and connections using +GF+ unions.

Electropure™ EDI thin-concentrate technology effectively eliminates scaling.
